• BFI measure daignostic system

Cellu Check Plus

The most advanced daignostic system invented, patented and made in Japan.

Cellu Check Plus™ is a patented technology as a missing-link on the current beauty and medical markets - a special design of BFI measure daignostic system giving detailed data. It provides comprehensive understanding and conselling on one body's fat, muscle, bone, water retention distribution, subcutaneous fat, cellulite level, muscles mass, loose skin for body, even fillers, sillicon can be seen immediately.

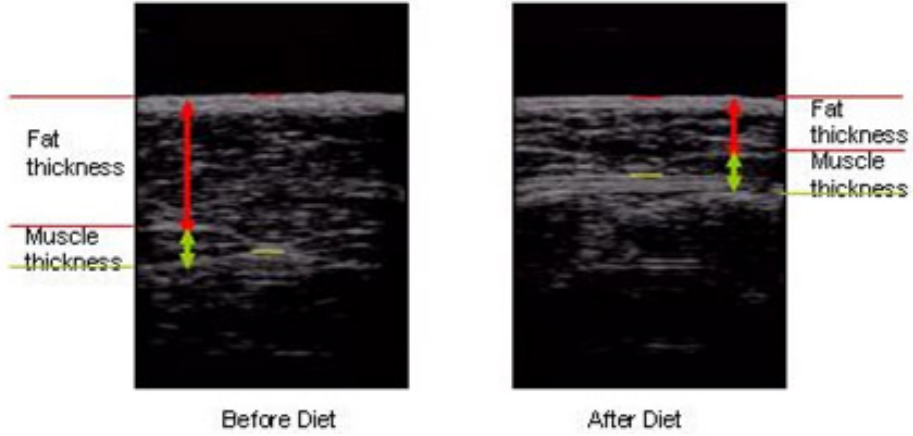

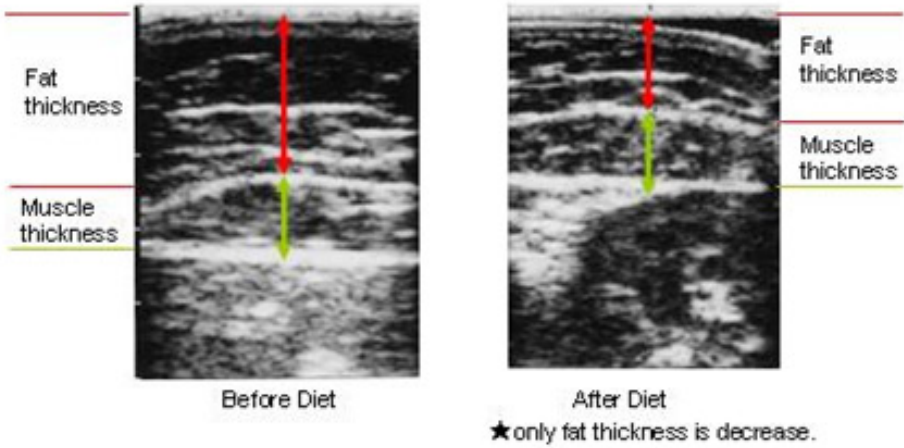

BFI™ is Body Fat Index an inclusive measurement prior BMI, which provides much more comprehensive information:

Fat thickness	Muscle thickness
Cellulite check	Fat total
Fat%	Fat kg
Body Mass Index	Muscle weight
Obesity Index	Basal metabolism
Body balance	Metobolic diet plan
Reduce calorie plan	Food and Exercise plan
Target BMI	Target simulation
Image simulation	Save measurement dates
Progress data	Check sheet

BFI refers to BMI of segmental parts of body and show the specific data defined by ultrasound:

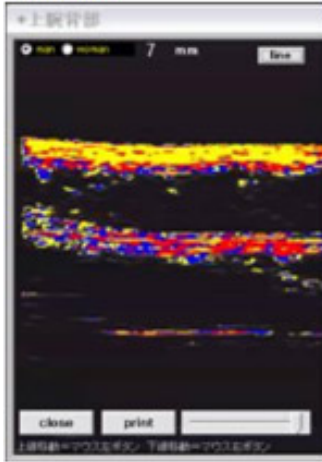

- Back Arm's BMI
- Abdomen's BMI
- Waist 'BMI
- Back Thigh's BMI
- Front Thigh's BMI

Fat thickness and Muscle thickness by ultrasound

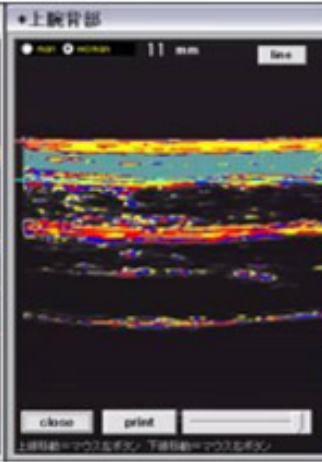

Classification of Fat:

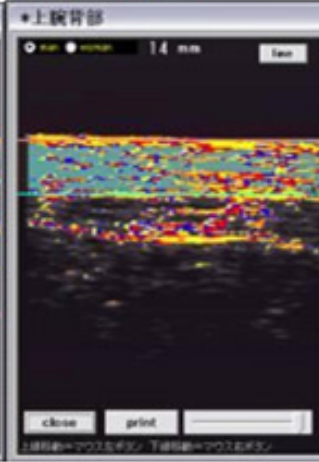

Sports

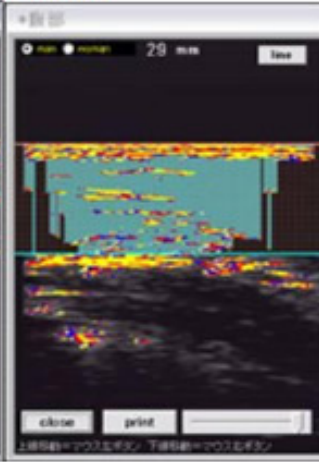

Fibrous

Edematous

Obese

BFI™ (Body Fat Index) instead of BMI (Body Mass Index)

The calculation of BMI is only relying on weight and height. ($BMI = \text{Weight (kg)} / \text{height (m}^2\text{)}$). BMI is not reflected body fat at all. Therefore, it is too general to provide counseling according to only BMI for body balance details.

It shows clearly where the fat thickness is most distributing at and how the body balance is. "BFI" can also find the figure and body balance so as to let you provide much more comprehensive advice professionally to the subjects more in details.
